structure of the A-domain of HMG1 and its interaction with DNA as
studied by heteronuclear three- and four-dimensional NNR
                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- SUBCELLULAR LOCATION: Nuclear and also cytoplasmic, associated with the plasma membrane of filipodia in process-growing cells, and also deposited into the substrate-attached material.
-!- SIMILARITY: Belongs to the HMG1/HMG2 procein family.
-!- SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3D-structure; Chromosomal protein, Direct protein sequencing, DNA-binding; Heparin-binding; Nuclear protein; Repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            87.0%; Score 187; DB 1; Length 214; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 7904. Application US/09513999C

Patent No. 6783961

GENERAL INPORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Duclert, A.
APPLICANT: Duclert, A.
TILE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
FILE REFERENCE: 59.US2.REG
CURRENT APPLICATION NUMBER: US/09/513,999C
CURRENT FILING DATE: 2000-02-24
PRIOR PILING DATE: 1999-02-26
NUMBER OF SEQ ID NOS: 36681
SOSTWARE: Patent.pm

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence Sequence Sequence Sequence Sequence Sequence

Publication No. US20040053841A1

GENERAL INFORMATION:

APPLICANT: Kevin J. Tracey

APPLICANT: Kevin J. Tracey

TITLE OF INVENTION: INHIBITORS OF THE INTERACTION BETWEEN

TITLE OF INVENTION: HMGB POLYPEPTIDES AND TOLL-LIKE RECEPTOR 2 AS

TITLE OF INVENTION: ANTI-INFLAMMATORY AGENTS

FILE REFERENCE: 3268.1001-007

CURRENT APPLICATION NUMBER: US/10/456,947

PRIOR APPLICATION NUMBER: 10/147,447
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

WPI; 2003-120594/11.

New isolated polypeptide having a vertebrate HWG A box, useful for inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.

Disclosure; Fig 12E; 82pp; English.

immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human/mouse/rat high mobility group box 1 (HMG1) B box protein sequence that can be used to stimulate cytokine activity and increase immune response to assist in

comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-actuaring HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by convention of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, amochiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, and an inflammatory atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is HMGI (also termed as HMGBI) B box found in human, mouse and rat
                                                                                                                                                                                                                                                                                                                                  ö

Human/mouse/rat high mobility group box 1 (HMGB1) B box protein.

(first entry)

26-AUG-2004

ADO71481;

ADO71481 standard; protein; 69 AA

RESULT 3

ADO71481

```
Human; mouse; high mobility group box 1 B box; HMGB1 B box; HMGB, thMGB A box; HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatoid arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancreatitis; repartionis, myocardial ischaemia; organic ischaemia; repartusion ischaemia; Behcet's disease; graft-versus-host disease; crohn's disease; ulcerative colitis; multiple sclerosis; cachexia; rat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a polypeptide comprising a high mobility group box protein (HWGB) A or B box, The HWGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that

New pharmaceutical composition comprises a polypeptide comprising an HMGB B box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.

WPI; 2004-420625/39.

Disclosure, SEQ ID NO 5; 68pp; English.

The invention describes a pharmaceutical composition comprising a polypeptide comprising an HWGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide

us-10-717-984-5.rag

```
specifically bind to the HWGB B box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammentory cytokine from a cell treated with HMGB, a method for effecting weight loops or treating obseity in a patient, a method of determining whether a compound inhibite inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obseity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obseity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepais, allograft rejection, rheumatoid arthritis, asthma, luques, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritornitis, untiple sclerosis or cachexia. This sequence contents a human/mouse/rat HMGBI B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pharmaceutical composition comprises a polypeptide comprising an HMGB ox or its functional variant, useful for stimulating or increasing an one response in an individual or for treating cancer in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic; gene therapy; vaccine; pharmaceutical composition;

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinfiammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to one-B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immune response in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) B box biologically active fragment.
                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               syndrome;

composition weight loss or treating obesity in a patient, a method for effecting weight loss or treating obesity in a patient, a method of detecting weight loss or treating obesity in a patient, a method of ceternianing whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TNF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, rheumatoid arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, chronic obstructive pulmonary disease, psoriasis, pancreatitis, chronic obstructive pulmonary disease, psoriasis, pancreatitis, chronic batchevis, burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, behcet's disease, graft-versus-host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. This sequence represents a human HMGB B box polypeptide of the invention.

Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its immunosuppressive fragment.

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural HMGB A box. The immune cell fragment of the vertebrate or non-natural HMGB A box. The immune antigen, non-self material (e.g. a cell or tissue such as bone marrow cells) or adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of adjuvant to the individual, by the transplantation of an organ into the individual or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HMGB A box, a non-naturally-occurring HMGB A box, a non-naturally-occurring HMGB A box, a claimed method of treating an autoimmune disorder in an individual comprises administering a HMGB polypeptide comprising a vertebrate and a vertebrate or non-naturally-occurring HMGB box. The HMGB polypeptide is preferably a HMGBI peptide and may be fragment of these, and a vertebrate or non-naturally-occurring HMGB box. The HMGB polypeptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is alleray, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, securing the B box of human HMGBI protein ADY85326. ö 9 64 1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK Gaps ; 0 9; Length 74; ; Score 370; DB 9; Length 7; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                       The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of condition at sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB hox but does not binding fragment) binds to a vertebrate HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB correction. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pencreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1. An identical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNNTAADDXQPYEKKAAKLK 64

The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigential prind to non-A box epitopes of HMGB, and inhibits release of specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB protein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, pooriasis, partreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1. An identical sequence is also found in rat and mouse HMGB1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antidiabetic; ophthalmological; nephropathic; antiarthritic; antiinflammatory; cytostatic; gynaecological; antipsoriatic; dermatological; antiviral; vasotropic; antiarteriosclerotic; antianginal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody or its antigen-binding fragment specific to a vertebrate high mobility group box (HMGB) A box that inhibits release of a proinflammatory cytokine from a cell treated with HMGB protein, useful

The present invention relates to the use, especially in vitro, of nucleic acids encoding high mobility group proteins for the following processes: a magingenesis (including in a wound bed), neovascularization, transmyocardial revascularization, wound healing, epithelialization and healing in cases of tooth or bone implants. The sequences and their encoded protein are useful for treating a very wide range of diseases: (proliferation, athritis, endometriosis, histicotrosis, psoriasis, rosacea, eruptive or cavernous haemangioma, tumours (especially melanoma, Kaposi sarcoma and basal cell carcinoma), haemorrhoids, atteriosclarosis, angina pectoris, ischaemia, infarction, infertility, wounds (including diabetic and other ulcers), also diseases associated with DNA damage, especially xeroderma pigmentosum, leather skin', skin cancers and ageing (including where associated with sunburn) and cardiac infarct, including cosmetic treatment, especially as a sun-protection composition. Compounds the protein and all the specified processes can also be used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61

                                                                                                                                                                                                                                                                                                                                                        New pharmaceutical composition comprises a polypeptide comprising an HMGB box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; high mobility group box B box; HMGB, HMGB A box; HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatord arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancratitis; cronic is peritonitis; burn; myocardial ischaemia; organic ischaemia; reperfusion ischaemia; Bahcet's disease; graft-versus-host disease; crohn's disease; ulcerative colitis; multiple sclerosis; cachexia.
HMGB B box; high mobility group; immune response; immunostimulation; cancer; human; high mobility group box 1; HMG1; cytokine activity; B box.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) B box biologically active fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     64

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunesuppressive fragment of the vertebrate or non-natural HMGB A box. The immune pathology is induced by the administration of a non-human antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of individual, or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural A box. A claimed method of treating an auto-maturally-occurring HMGB A cox, an on-naturally-occurring HMGB A box, an immunosuppressive fragment of these, and a vertebrate or non-naturally-occurring HMGB B cox, an immunosuppressive fragment of these, and a vertebrate or non-naturally-occurring HMGB C box, an immunosuppressive fragment of these, and a vertebrate or non-naturally-occurring HMGB C box, an immunosuppressive fragment of these and a vertebrate or non-naturally-occurring HMGB C box, an immunosuppressive fragment of these and a vertebrate or non-naturally-occurring HMGB C box, an immunosuppressive and a vertebrate or non-naturally-occurring HMGB continued the cleaning an element of these and a vertebrate or non-naturally-occurring HMGB continued the cleaning an element of these and a vertebrate or non-naturally-occurring HMGB continued to the cleaning an element of these and a vertebrate or non-naturally-occurring HMGB continued to the cl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its immunosuppressive fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammaerory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB box but do not specifically bind to one. B proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the playpeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an useful in treating obesity and conditions characterised by activation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, theumatorid arthritis, asthma, lugus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, Behcer's disease, graft-vereus.host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. This sequence represents a human HMGB B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNTAADDKOPYEKKAAKLK

The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB A box but does not binding fragment) binds to a vertebrate HMGB A box but does not specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB protein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndromic obstructive pulmonary disease, psoriasis, peniconitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, arthritis, and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1. ANY85012. An identical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 92 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAF15566 to AAF16505 encode the human prostate cancer associated

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide and polypeptides at least 80% identical to the TAT nucleic acids and polypeptides appetides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; a peptide or organic acid; an antibody specific for a TAT polypeptide; and retroads and compositions for the treatment or diagnosing of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, carvical cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central cancer, nung cancer, cervical cancer, cancers of the central used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence 100.0%; Score 370; DB 8; Length 168; 100.0%; Pred. No. 1e-37; Live 0; Mismatches 0; Indels Query Match 100. Best Local Similarity 100. Matches 69; Conservative

nonhistone chromosomal protein HMG-1 - rat
NyAlternate names: 30K heparin-binding protein, brain; amphoterin
Cispecies: Rattus norvegicus (Norway rat)
Cispecies: Date: 1922 Resquence revision 31-Dec-1992 #text change 09-Jul-2004
Cisacession: A41175; A27298; A30188; B48771; A48771; C48771
R;Meremmies, J; Pihlaskari, R; Laitinen, J; Wartiovaara, J; Rauvala, H.
J; Biol. Chem. 266, 16722-16729, 1991
A;ritle: 30-kDa heparin-binding protein of brain (amphoterin) involved in neurite outgro

A, Accession: A41175 A, Molecule type: mRNA A, Residues: 1-215 <MER>

A;Cross-references: UNIRKOT:P07155; UNIPARC:UPI0000008A6; GB:M64986; NID:g202884; PIDN:. A;Note: part of this sequence, including the amino end of the mature protein, was confir. A;Note: the authors used antibodies to synthetic peptides to demonstrate this protein in
